

MILE-HIGH VIDEO 2023

Live Streaming UHD 4K Stacks through Distributed Encoding

Eric Harter (he/him)

Senior Software Engineer AWS Elemental MediaLive

First Question: Why Live Stream in UHD 4K?

- Synonymous with high-quality streaming
- Matches the capabilities of today's displays

UHD 4K vs 1080p

- UHD 4K is ...
 - 4X Compute Workload
 - 4X Uncompressed Payload

End-to-End Live Streaming

Customer Iron Triangle

Won't Compromise for 4K

Problem: UHD Stack Complexity

- Full UHD Stack requires 3 Sync'd Channels
- Complex Operational Workload
- Requires Input Timecodes

Overview: Video Processing Pipeline

Latency

Overview: Video Processing Pipeline

Latency

Solution: Distributed Encoding

Solution: Distributed Encoding

Same Latency

How: AWS CDI (Cloud Digital Interface)

How: Data Plane Split + Compute Scaling

Conclusion

AWS CDI + EC2 enables

 Preserved Simplicity/Latency/Quality

- Scalable Distributed Workflows
- End-to-End streaming of Live UHD Full Stacks

Thank you!
